Cryogen-free

Sample in exchange gas cryostats <2 K to 800 K

These Lake Shore closed-cycle refrigerator cryostats cool the sample in exchange gas. They allow for uniform cooling and fast sample exchange. With a wide range of electrical feedthrough and window options, they are a versatile choice for making cryogenic measurements without using liquid helium.

Temperature control

Included

Every cryostat includes a Lake Shore temperature controller and calibrated sensor.

MeasureLINK control software

Optional add-on

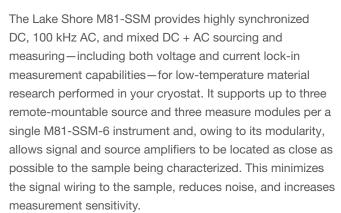

MeasureLINK software enables a wide range of capabilities including charting and logging, system monitoring with a cryostat-specific process view, and controlling Lake Shore equipment as well as third-party instrumentation. No programming required—drag-and-drop to create temperature sweeps, access measurements, and see real-time internal cryostat temperatures in process view.

Condensing zone option

CONSULT Allows helium to condense in the sample tube

for single-shot operation to 2 K

Sample positioners

CONSULT Standard sample positioner with calibrated

temperature sensor for operation to 420 K (sample tube evacuated above room

temperature)

CONSULT High-temperature sample positioner with type E

thermocouple for operation to 800 K (sample tube evacuated above room temperature)

CONSULT Upgrade sample positioner to precision design

with manual linear manipulator (2 in travel)

Windows

For optical variants, windows are available in multiple thicknesses and materials. See our cryostat window selection guide and contact sales for additional information. For non-optical variants, the tail may be made from aluminum or vanadium for neutron scattering applications.

standard water-cooled

3. Select pump (optional)

Each cryostat requires a pump to operate. If you do not have an existing pump, select one of the pumps below.
