# Cryogen-free

# Sample in exchange gas cryostats 1.5 K to 800 K

These Lake Shore closed-cycle refrigerator cryostats cool the sample in exchange gas. Helium circulates through an independent cooling loop to cool samples to temperatures as low as 1.5 K, allowing nearly unlimited operation. The sample space is separate from the cooling loop, minimizing the risk of blockages. With a wide range of electrical feedthrough and window options, they are a versatile choice for making cryogenic measurements without using liquid helium.

### Key features

<1.5 K to 800 K

Cryogen-free

Sample in exchange gas

#### Featured components

Choice of inserts, including helium-3, sample in vacuum, or rotating sample holder

Gas handling system with scroll pump

Integrated control heater and calibrated control sensor

#### Cryostat models

**SHI-950-LT** low-temperature 1.5 K, optical

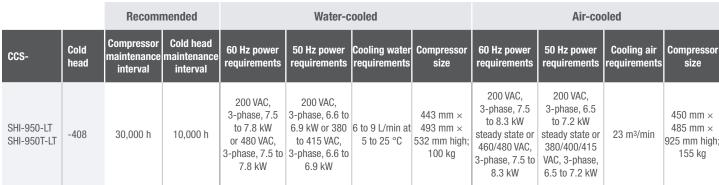

**SHI-950T-LT** low-temperature 1.5 K, non-optical

# **Specifications**

		SHI-950-LT	SHI-950T-LT
Minimum temperature options	Standard	1.5 K	
	With optional He-3 insert	300 mK	
Maximum temperature		800 K	
Typical temperature stability <sup>1</sup>		±50 mK	
Cold head location		Тор	
Cooldown		9 h	8 h to 9 h
Sample cooling time <sup>2</sup>		~80 min	
Optical		✓	×
Height (approximate)		142 cm to 168 cm (56 in to 66 in)	
Weight (approximate)		113.4 kg (250 lb)	
Sample tube size		51 mm (2 in)	51 mm (2 in) <sup>3</sup>
Window block size		108 mm (4.25 in) square	_
Recommended maintenance		13,000 h	

<sup>&</sup>lt;sup>1</sup>Measured with temperature controller

## Facility requirements

<sup>&</sup>lt;sup>2</sup>Time to cool sample from room temperature in an already cold cryostat

<sup>&</sup>lt;sup>3</sup>Narrow tails available for room temperature bore magnet integration

# Complete your system

## Temperature control

Included

Every cryostat includes a Lake Shore temperature controller and calibrated sensor.

## MeasureLINK control software

Optional add-on

MeasureLINK software enables a wide range of capabilities including charting and logging, system monitoring with a cryostat-specific process view, and controlling Lake Shore equipment as well as third-party instrumentation. No programming required—drag-and-drop to create temperature sweeps, access measurements, and see real-time internal cryostat temperatures in process view.

## Source + measure + lock-in

Optional add-on

The Lake Shore M81-SSM provides highly synchronized DC, 100 kHz AC, and mixed DC + AC sourcing and measuringincluding both voltage and current lock-in measurement capabilities—for low-temperature material research performed in your cryostat. It supports up to three remote-mountable source and three measure modules per a single M81-SSM-6 instrument and, owing to its modularity, allows signal and source amplifiers to be located as close as possible to the sample being characterized. This minimizes the signal wiring to the sample, reduces noise, and increases measurement sensitivity.

# Configure your cryostat

## 1. Select cryostat

SHI-950-LT Optical, low-temperature
SHI-950T-LT Non-optical, low-temperature

**CUSTOM** Custom configurations are available to fit your

experiment needs—contact Sales for details

## 2. Select cryostat configurations

Sample holders

SH-BLANK-1.5-STD Blank

SH-BLANK-1.5-800 Blank, high-temperature

SH-OPTICAL-1.5-STD Optical

SH-OPTICAL-1.5-800 Optical, high-temperature

SH-RESISTIVITY-1.5-STD Resistivity

**CONSULT** Custom sample holders

Sample positioners/inserts

**CONSULT** Helium-3 insert for 300 mK base temperature

**CONSULT** Sample in vacuum insert

**CONSULT** Standard sample positioner with calibrated

temperature sensor for operation to 500 K (sample

tube evacuated above room temperature)

**CONSULT** High-temperature sample positioner with type E

thermocouple for operation to 800 K (sample tube

evacuated above room temperature)

**CONSULT** Custom sample positioner with tilt rotation stage

#### Windows (optical variants only)

Windows are available in multiple thicknesses and materials. See our cryostat window selection guide and contact sales for additional information.

**Compressor type** 

**CONSULT** Substitute air-cooled compressor in place of

standard water-cooled

# 3. Select pump (optional)

Each cryostat requires a pump to operate. If you do not have an existing pump, select one of the pumps below.

**TSJ-85-D** Turbopumping station with scroll backing pump

# 4. Select cryostat wiring

We offer a variety of both unwired and wired feedthroughs to complete your measurement setup. Please refer to the cryostat feedthroughs and wiring guide for more information.

## 5. Select optional system configurations

#### **Measurement instrumentation**

Cryostats come standard with one temperature controller.

336 Model 336 temperature controller
336-3060 Model 336 temperature controller with installed 3060 thermocouple option card

#### M81-SSM electronic synchronous source measure system

Contact us for cables and adapters for M81-SSM/cryostat integration.

M81-SSM instrument with X = 2, 4, or 6 channels;

half the channels are dedicated to sourcing and the

other to measurement; see modules below

VM-10 AC/DC voltage measure module + lock-in
 BCS-10 AC/DC balanced current source module
 CM-10 AC/DC current measure module + lock-in

**VS-10** AC/DC voltage source module

## 6. Select optional control software

ML-MCS MeasureLINK-MCS software with scripting

development license; includes lifetime activation for version purchased and full MeasureLINK capability on up to 5 computers with Lake Shore instrument drivers, chart recorder functionality, and drag-and-drop measurement sequences; some

application packs sold separately

## 7. Select additional accessories

Cryostats come standard with two installed temperature sensors. Other sensors are available—contact us.

CX-1050-CU-HT-1.4M Cernox® magnetic field independent, calibrated
