Dechlorane Plus, & UV-328 Compliance Statement

Lake Shore Cryotronics Inc., upon review of the material composition and declaration forms and based on the best available information provided by our suppliers, and to the best of our knowledge declares that our products do not contain or use UV-328 or DP as ingredients or additives. Some of our products are proprietary, and suppliers may choose not to reveal all ingredients. Lake Shore Cryotronics Inc., therefore, makes no warranties, expressed or implied, and assumes no liability in connection with the accuracy of this information.

- As a UV absorber, UV-328 can be used to prevent materials from discoloration and degradation. It is mainly used in paints and coatings, sealants, and resins for interior and exterior components and liquid crystal panels.

- Dechlorane plus (DP), as a polychlorinated flame retardant, can be used as a modifier for thermoplastic plastics such as nylon 66, nylon 6, PBT, HIPS, ABS, and PP.

We believe our products follow the Stockholm Convention on Persistent Organic Pollutants (POPs) for the global elimination of these chemicals. Lake Shore Cryotronics Inc. continues to monitor its products and the supply chain for the requirements posed by the regulation.
